

We live in an innovative age, an age of transformation. Traditional insurance business models and ways of working are being challenged. Within the back office, insurers are under pressure to transform and mitigate the risks within their business processes. But where do you start, and which areas should you focus on?

By applying MBE's unique and proprietary methodology for transforming actuarial performance - the **Actuarial Performance Management (APM™)** Framework - we can assess your current actuarial performance relative to six APM Enablers to clearly identify what and how you need to improve to achieve Actuarial Excellence.

How the APM™ will benefit you

- 1 boost the potential of your actuarial operations.
- 2 deliver clear improvements to data accuracy, compliance and levels of risk.
- 3 improve operational excellence through released capacity, reduced costs and streamlined processes.
- 4 provide enhanced risk management capabilities.
- 5 increase competitiveness whilst ensuring regulatory compliance.

The APM™ Framework

APM™ Framework Assessment

By utilising the **APM™** Framework we can carry out a full assessment of your current actuarial performance.

The assessment will enable us to calculate the strengths and weaknesses of your actuarial operation across the six APM enablers.

You will receive a complete analysis and report containing detailed and actionable insights on how you can improve your operational performance, and achieve actuarial excellence.

For a complimentary analysis of your actuarial performance contact us at info@mbeconsulting.com.
